

IILM UNIVERSITY

GREATER NOIDA

INTERNSHIP PRESENTATION

Java Full Stack Development

An 8-Week Industry Internship Program

STUDENT NAME

Shivanshu Tiwari

ENROLLMENT NUMBER

CS-23411121

PROGRAM & SEMESTER

B.Tech CSE — 7th Semester

HOST ORGANIZATION

EduSkills Academy

ABOUT THE HOST

EduSkills Academy

EduSkills Academy is an industry-academia collaboration platform that partners with corporates and universities to deliver structured, credentialed internship programs. Learners complete guided, project-based modules that mirror real enterprise software-development workflows.

8

Weeks Duration

8

Core Modules

1

Full Stack Domain

CREDENTIAL SUMMARY

Domain	Java Full Stack
Format	Internship Credential
Duration	8 Weeks
Student	Shivanshu Tiwari
Certificate ID	2026-328F130950
Issued On	June 10, 2026

"Successfully achieved the Internship Credential by completing the 8-week program."

Program Objectives

Build End-to-End Applications

Design and develop complete web applications spanning front-end UI, back-end services, and persistent storage.

Apply Enterprise Java Patterns

Use Spring, Spring Boot, and Hibernate to build maintainable, layered, enterprise-grade Java applications.

Practice Industry Workflows

Gain hands-on exposure to version control, relational databases, and collaborative development practices.

Strengthen Core Fundamentals

Reinforce HTML, CSS, JavaScript, and Core/Advanced Java fundamentals that underpin full stack development.

Foundations of the Web

Weeks 1–3

01

HTML

Introduction to HTML and Web Page Structure

02

CSS & Bootstrap

CSS Fundamentals for Web Design and the Bootstrap Responsive Framework

03

JavaScript & jQuery

Interactive Web Development with JavaScript, simplified further using jQuery

Enterprise Java Development

Weeks 4–6

Core & Advanced Java

Fundamentals of Java programming, followed by enterprise application development using advanced Java concepts.

Spring Framework

Dependency injection, MVC architecture, and core enterprise Java development patterns.

Spring Boot

Rapid, convention-driven application development that simplifies Spring configuration and deployment.

Hibernate ORM

Object-relational mapping to bridge Java objects with relational database tables.

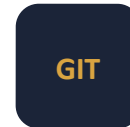

Persistence & Collaboration

Weeks 7–8

MySQL

Relational database design, schema modeling, and SQL for enterprise data storage.

Git & Version Control

Collaborative source-control workflows: branching, commits, and merges for team-based development.

FULL TECHNOLOGY STACK COVERED

HTML

CSS

Bootstrap

JavaScript

jQuery

Core Java

Advanced Java

Spring

Spring Boot

Hibernate

MySQL

Git

How the Stack Fits Together

OUTCOMES

Skills Gained

Technical Skills

Full stack web application development

Enterprise Java with Spring & Spring Boot

ORM and relational database design

Responsive front-end development

Professional Skills

Structured, self-paced project execution

Version control and collaborative workflows

Debugging and iterative problem solving

Reading and applying technical documentation

REFLECTION

Key Takeaways

“

Working across the full stack clarified how front-end, business logic, and data layers interact in a real enterprise application.

“

Spring Boot's convention-over-configuration approach significantly reduced boilerplate compared to plain Spring setup.

“

Hibernate's ORM mapping made the relationship between Java objects and MySQL tables far more intuitive.

“

Consistent use of Git reinforced the discipline needed for organized, trackable development work.

Thank You

Questions & Discussion
